                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC to express protein of the invention is useful for studying invertebrate CC symporter cell surface receptor protein activity, by detecting the CC phenotype caused by the expression or mis-expression of the protein in CC the animal. Nucleic acids encoding the invertebrate receptor protein or CC useful for generating mutant phenotypes in an animal model or living CC cells that are useful as pesticides. SNF nucleic acids are CC useful for generating mutant phenotypes in an animal model or living CC proteins which are useful as pesticide or drug targets. The genetically CC modified organisms or cells are useful in screening assays to identify CC modified organisms or cells are useful in screening assays to identify CC modified organisms or calls are useful in the identification of new drug targets, therapeutic agents, diagnostics and prognostics CC useful in treatment of disorders associated with ion channels. The nucleic acid molecules are also useful as hybridisation probes. The present sequence is brosophila melanogaster (dm) K+ coupled coupled as mino acid transporter of the SNF family which is referred as dmKSNF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01676-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
          cc candidate compound especially a putative pesticidal or pharmaceutical cagent that interacts with an invertebrate symporter cell surface cc receptor protein or its fragment. Insect or worm genetically modified to express protein of the invention is useful for studying invertebrate symporter cell surface receptor protein activity, by detecting the phenotype caused by the expression or mis-expression of the protein in the animal. Nucleic acids encoding the invertebrate receptor protein or their fragments are useful as biopesticides. SNF nucleic acids are useful for generating mutant phenotypes in an animal model or living cells that are useful as pesticide or drug targets. The genetically modified organisms or cells are useful in screening assays to identify pesticides or therapeutics and thus are useful in the identification of new drug targets, therapeutic agents, diagnostics and prognostics. The useful in treatment of disorders associated with ion channels. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-MAR-2000;

                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30512).
                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

The BT1 is used in screening assays to identify candidate compounds which are potential pesticide agents or therapeutics that interact with BT1 proteins. It can also be used to genetically modify metazoan invertebrate animals resulting in BT1 expression or mis-expression. It can also be used in methods for identifying new drug targets, therapeutic agents, diagnostics and prognostics useful in the treatment of disorders associated with molecular transport across the membrane. The BT1 nucleic acid or its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     fragments, such as an antisense sequence or double stranded RNA, may be used as a biopesticide to inhibit BTI function. The invertebrate model organisms such as Drosophila melanogaster are useful for rapidly carrying out large-scale systematic genetic screens and therefore for analysing expression and mis-expression of BTI protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL18176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB7373-ABB72072).
                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                            Sequence

The invention relates to invertebrate symporter cell surface receptors of the sodium/neurotransmitter family (SNF) and nucleic acid molecules encoding such receptors. The SNF protein is useful for detecting a candidate compound especially a putative pesticidal or pharmaceutical agent that interacts with an invertebrate symporter cell surface receptor protein or its fragment. Insect or worm genetically modified to express protein of the invention is useful for studying invertebrate symporter cell surface receptor protein activity, by detecting the phenotype caused by the expression or mis-expression of the protein in the animal. Nucleic acids encoding the invertebrate receptor protein or their fragments are useful as biopesticides. SNF nucleic acids are useful for generating mutant phenotypes in an animal model or living cells that are used to study the regulation of genes encoding the

The genetically modified organisms or cells are useful in screening assays to identify pesticides or therapeutics and thus are useful in the identification of new drug targets, therapeutic agents, diagnostics and prognostics useful in treatment of disorders associated with ion channels. The nucleic acid molecules are also useful as hybridisation probes. The present sequence is prosophila melanogaster (dm) SNF homologue
strychnine-sensitive glycine receptor; treatment; diagnosis; nervous system disorder; myocionus; muscle spasm; hyperactivity; epilepsy; spasticity; head trauma; neuronal cell death; multiple sclerosis; spinal cord injury; Huntington's disease; amyotrophic lateral sclerosis.
                                                                                                                                       Human; GlyT-2 transporter; glycine transporter;
activity; N-methyl-D-aspartate receptor; NMDA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a human GlyT-2 transporter mutant protein. GlyT-2 is a glycine transporter found predominantly in the brain stem and the spinal cord. GlyT-2 regulates the levels of glycine, a major neurotransmitter, that preferentially influences the activity of N-methyl-D-aspartate (NMDA) receptors and strychnine-sensitive glycine receptors. The GlyT-2 protein can be used to treat or to diagnose a nervous system disorder or condition, e.g. pain, myoclonus, muscle spasm or hyperactivity, epilepsy or spasticity associated with stroke, head trauma, neuronal cell death, multiple sclerosis, spinal cord injury, dystonia, Huntington's diseasor amyotrophic lateral sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic.

                                                         The present sequence represents a human GlyT-2 transporter mutant protein. GlyT-2 is a glycine transporter found predominantly in the brain stem and the spinal cord. GlyT-2 regulates the levels of glycine, a major neurotransmitter, that preferentially influences th activity of N-methyl-D-aspartate (NMDA) receptors and strychnine-sensitive glycine receptors. The GlyT-2 protein can be used to treat or to diagnose a nervous system disorder or condition,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a variant of the human GlyT-2 transporter. The cDNA encoding GlyT-2 was generated by reverse transcription PCR (RT-PCR) from human spinal cord or cerebellum polyA mRNA. GlyT-2 is a glycine transporter found predominantly in the brain stem and the spinal cord. GlyT-2 regulates the levels of glycine, a major neurotransmitter, that preferentially influences the activity of N-methyl-D-aspartate (NNDA) receptors and strychnine-sensitive glycine receptors. The GlyT-2 protein can be used to treat or to diagnose a nervous system disorder or condition, e.g. pain, myoclonus, muscle spasm or hyperactivity, epilepsy or spasficity associated with stroke, head trauma, neuronal cell death, multiple sclerosis, spinal cord injury,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents the human SC polypeptide glycine transporter. The polypeptide is useful in a method for screening identify compounds which stimulate or inhibit the function of the polypeptide and in a process for diagnosing a disease or a susceptibility to a disease in a subject related to expression or activity of the polypeptide e.g. treatment of neuropathic pain, or pain, spasticity, myoclonus, epilepsy, stroke, head trauma, spinal injury, dystonia, multiple sclerosis, armyotrophic lateral sclerosis, and the polypeptide e.g. treatment of neuropathic pain, or pain, spasticity, myoclonus, epilepsy, stroke, head trauma, spinal injury, dystonia, multiple sclerosis, armyotrophic lateral sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            identification; neuropathic pain; spasticity; myoclonus; epistroke; head trauma; spinal cord injury; dystonia; multiple arnyotrophic lateral sclerosis; Huntington's disease;

protein could, therefore, we used to identify inhibitory compounds which prevent GlyT2 activity, causing a decrease in muscle hyperactivity. They could be used to treat diseases or conditions associated with muscle contraction, including muscle spasticity (such as that due to epilepsy, stroke, head trauma, multiple sclerosis, neuronal cell death, spinal cord injury and dystonia), myoclonus, epilepsy, Huntington's disease, amyotrophic lateral sclerosis and pain.

Note: This sequence is not shown in the specification, but is derived from the hGlyT2 wild type sequence shown in SEQ ID NO: 124 (AAB09898).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Similarity
